

Maintenance and repair works

We have the know-how and the experience in the maintenance of any kind of industrial stacks, for which we can:

- perform the necessary maintenance for to keep their good working order;
- carry out repair works in order to recover their lost properties;
- modify the design in order to improve their functioning or implement new equipment.

Our specialized knowledge of materials (steel liner, composite materials, corsets, extenders and more) guarantees the quality of our repair work. We work regularly outside of France, relying as much as possible on local teams, but bringing our experience, organizational capabilities, specialized equipment and site management expertise to every project.

Maintenance of a concrete stack for a district heating boiler next to Lyon (France).

Maintenance of a concrete stack with a inner brick liner for a concrete production unit in Tunisia.

Complete refurbishing (concrete shell and inner brick liner) of a 140 m high stack for a steel producer in France.

Repairing (concrete shell and inner brick liner) for a glass production unit in Belgium.

Insertion of a stainless steel inner liner in a steel stack.

Repairing of a brick liner.

Maintenance of a brick liner in a huge stack of the French electricity provider (EdF).
